

Application Name: RTIMNLD

Organization Name: Transavia

Data Model Design Approach:

- 1). Always create data models (data types) in the **Rules** ruleset.
- 2). Design data models strictly according to the business use case.
- 3). While creating properties, ensure that their names and structures exactly match the use case. Any deviation may cause application issues; therefore, this must be done with due care.
- 4). Create a dataset for each data model specific to its respective class, and ensure that more than one key is defined (mandatory
